

WHAT IS CLAIMED IS:

1. An anisotropic conductive adhesive agent comprising:

a first adhesive layer; and

a second adhesive layer;

wherein the first adhesive layer includes a plurality of electrically conductive particles, and the second adhesive layer is laminated onto the first adhesive layer;

the second adhesive layer is thicker than the first adhesive layer; and

a particle diameter of the electrically conductive particle is smaller than a thickness of the first adhesive layer.

2. The anisotropic conductive adhesive agent according to claim 1, wherein the first adhesive layer and the second adhesive layer are comprised of the same material.

3. The anisotropic conductive adhesive agent according to claim 1, wherein the first adhesive layer and the second adhesive layer are comprised of an insulating adhesive agent.

4. The anisotropic conductive adhesive agent according to claim 1, wherein the particle diameter of the

electrically conductive particles is smaller than $\frac{1}{2}$ of the thickness of the first adhesive layer.

5. The anisotropic conductive adhesive agent according to claim 1, wherein the plurality of electrically conductive particles are unevenly distributed on a surface of the first adhesive layer.
